Digital literacy:

Project Report Format

Name: NIYA SAJI
Reg No: 25MIB10017
Branch: Int. AI and Bioinformatics
Year: 2025
Course Code: CSE0001
Date: 27 March 2026

Introduction

This project is based on understanding and applying the concept of digital literacy in practical situations. Digital literacy is not just about using technology but also about using it in a safe, responsible, and effective way. Through this project, I explored different aspects such as creating digital content, practicing coding, using collaboration tools, maintaining professional communication, and understanding cyber safety. Each task helped me gain hands-on experience with real-world digital tools and improved my awareness of online behavior. Overall, this project helped me develop both technical and practical skills that are useful in academic and everyday digital activities.

Task 1 Write-up

In Task 1, I created a digital poster on the topic of digital literacy. The poster included key areas such as what digital literacy is, useful digital tools for students, safe internet practices, professional online presence, and email etiquette. I designed the poster using a Canva-style layout with simple visuals, icons, and soft colors to make it easy to understand. While creating the poster, I focused on keeping the content clear and visually appealing. This task helped me understand how to present information creatively and how design plays an important role in communication. It also improved my awareness of important digital practices.

Task 2 Write-up

In Task 2, I set up a repository to organize all my work. I created separate folders for each task and added the required files in a structured way. I also included README

files to explain each task clearly. This helped me understand how to manage and present project work properly. Creating a repository also gave me a basic idea of how projects are documented and shared. In the future, I can use this knowledge to maintain better records of my work and improve my project organization skills.

Task 3 Write-up

For Task 3, I explored coding and collaboration platforms. I used HackerRank to practice coding and worked on a program related to input buffer management in C. This helped me understand how input works and how to avoid common mistakes while taking user input. Along with this, I created a Google Form titled “Digital Literacy Awareness Quiz” with five questions. I also connected it to a Google Sheet to view responses. This task helped me improve my coding skills and also taught me how to use digital tools for creating and sharing content.

Task 4 Write-up

In Task 4, I worked on professional communication and online etiquette. I wrote two formal emails—one requesting an assignment extension and another applying for an internship. This helped me understand how to write clear and polite emails with proper structure. I also created a checklist of social media do’s and don’ts, which highlighted responsible online behavior. From this task, I learned the importance of communication skills and how small details like tone and clarity can make a big difference.

Task 5 Write-up

In Task 5, I learned about cybercrime by studying UPI online payment fraud. What surprised me the most was how simple tricks can lead to serious problems like loss of money. I realized that people often fall for scams due to lack of awareness. One habit I will change is being more careful while clicking links and making online payments. I will always verify information before taking any action. This task made me more aware and responsible while using digital platforms.

Conclusion

Overall, this project helped me improve my understanding of digital literacy in a practical way. I learned how to use technology responsibly, communicate professionally, and stay safe online. It also improved my skills in coding, design, and project organization. These learnings will be useful for my academic work and future career.
